Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                 J. Bacteriol. 183:2672-2674 (2000).
-!- CATALYTIC ACTIVITY: (R.-glycerate + NAD(P)(+) = 2-hydroxy-3-
oxopropanoate + NAD(P)H.
-!- PATHWAY: D-galactarate metabolism; third step.
-!- SIMILARITY: Belongs to the 3-hydroxyisobutyrate dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 294;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lloyd C., White S.;
Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: 3-hydroxy-2-methylpropanoate + NAD(+) = 2-methyl-3-oxopropanoate + NADH.
-!- SUBCELLULAR LOCATION: Mitochondrial (By similarity).
-!- SUMILARITY: Belongs to the 3-hydroxyisobutyrate dehydrogenase
                                                                                                                                                                                                                        17;
